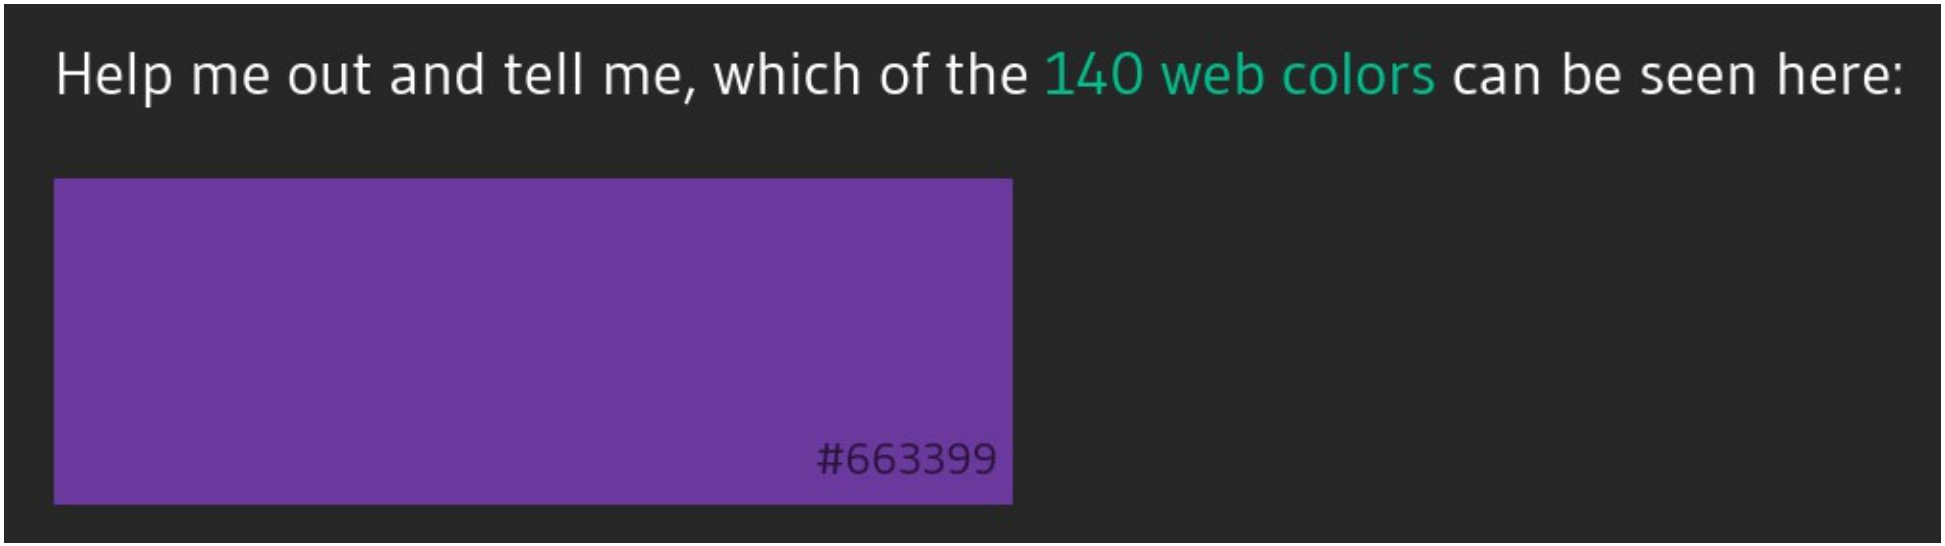
Hack The Web – Colors



In this challenge, we're told to identify a color, and we're also given a code

HTW – Colors
Color Codes

In computer programs, it's common to assign colors to different hexadecimal codes depending on how much red, green, and blue light is present in the color

HTW – Colors
Color Codes

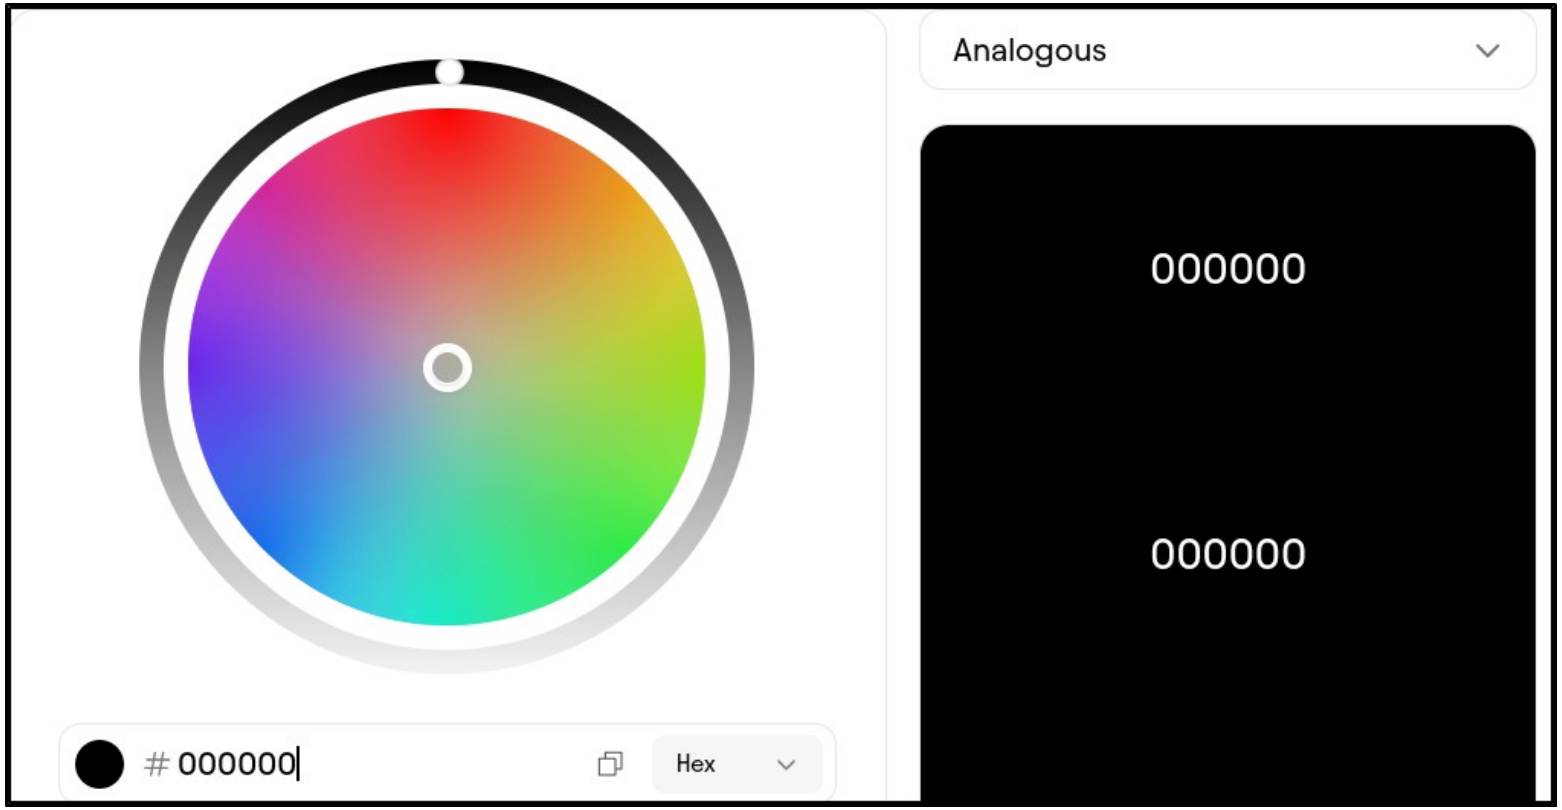
```
Color Codes (Hexadecimal)

663399 ⟵ color code
RRGGBB

    66 ⟵ first two digits are red
    33 ⟵ second two digits are green
    99 ⟵ third two digits are blue
```

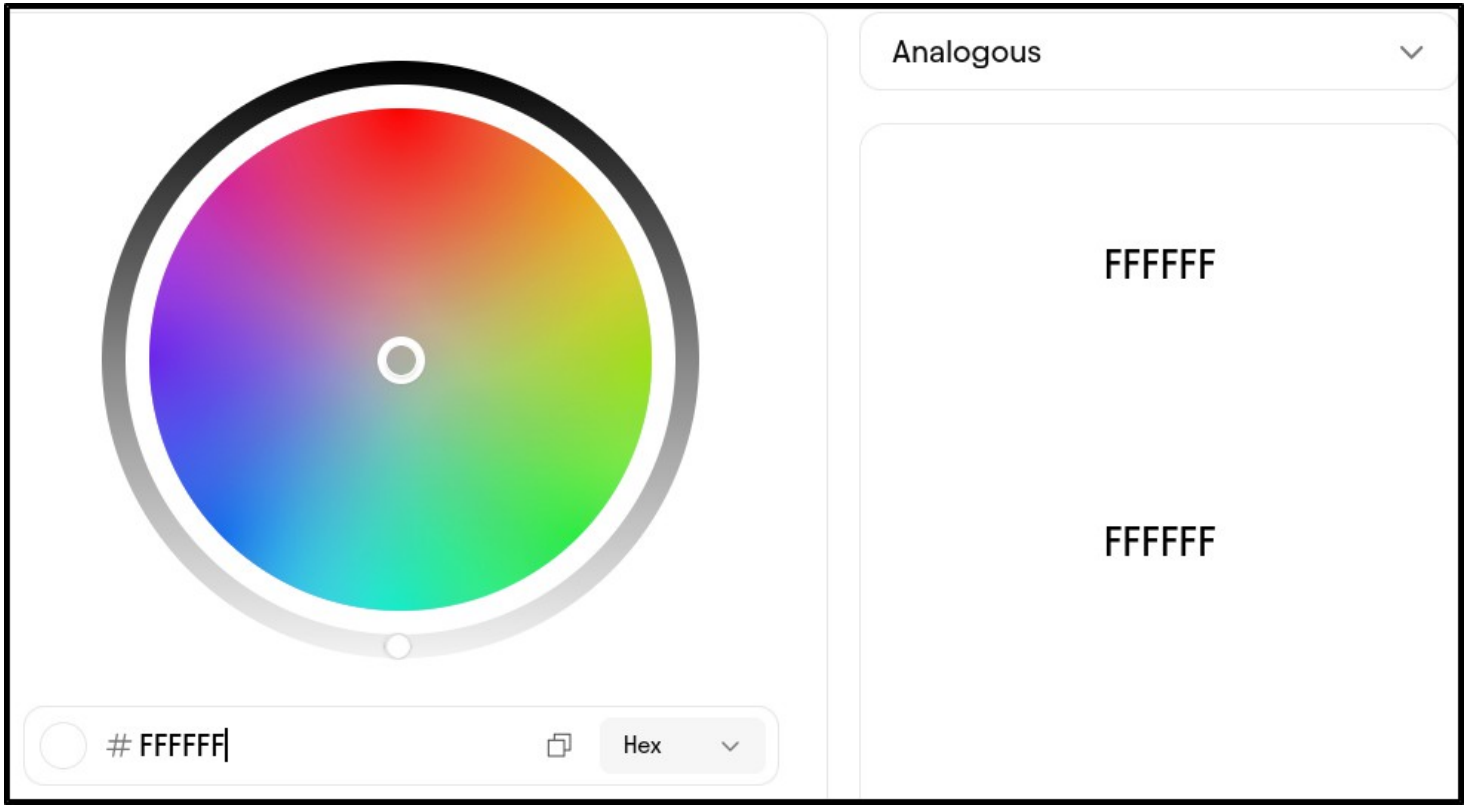
So if we break down the color code we're given, we see that it's indicating a certain amount of red, green, and blue light

HTW – Colors
Color Codes



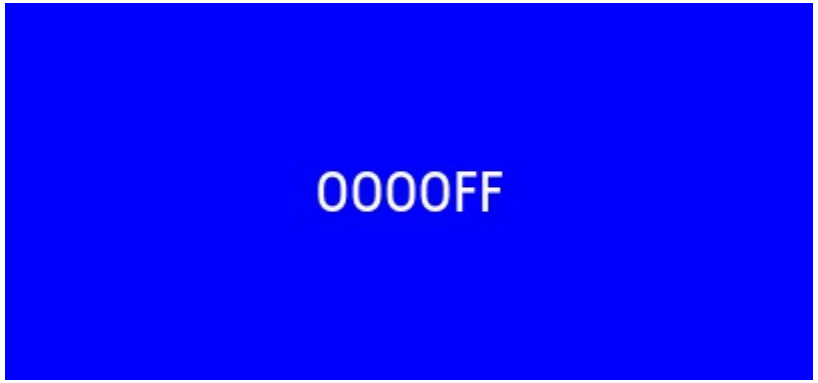
If we look at the resulting color for the code 000000, the color is black (no light values)

HTW – Colors
Color Codes



If we look at the resulting color for the code FFFFFF, the color is white (full light values)

HTW – Colors
Color Codes



If we look at the codes FF0000, 00FF00, and 0000FF, they correspond to pure red, pure green, and pure blue, respectively
