

Hacker Holidays 2026 – Day 2

Room 404

In this challenge for the Hacker Holidays, we're asked to dump exposed source code from a web app

Hacker Holidays 2026 – Day 2

Room 404

`dirb http://<IP_ADDRESS>:8080`

```
—— Scanning URL: http://10.146.141.116:8080/ ——  
+ http://10.146.141.116:8080/.git/HEAD (CODE:200|SIZE:21)
```

The first thing we do is locate the source code,
which we can do with the Dirb tool

Hacker Holidays 2026 – Day 2

Room 404

`dirb http://<IP_ADDRESS>:8080`

```
—— Scanning URL: http://10.146.141.116:8080/ ——  
+ http://10.146.141.116:8080/.git/HEAD (CODE:200|SIZE:21)
```

The Dirb tool identifies a Git repository on the server, which is used for collaborative software development

Hacker Holidays 2026 – Day 2

Room 404

git-dumper

A tool to dump a git repository from a website.

We can use a tool called Git dumper to dump out the repository so we can examine the files in detail

Hacker Holidays 2026 – Day 2

Room 404

git log -p

```
diff --git a/README.md b/README.md
new file mode 100644
index 0000000..a5965c5
--- /dev/null
+++ b/README.md
@@ -0,0 +1,6 @@
+# Byte Lotus – Guest Experience Platform
+
+Internal staging repository for the guest app and concierge personalization
+service. Do not deploy this folder to production.
+
+Staging flag (remove before launch): THM{byt3_lotus_n3w3r_f0rg3ts}
```

After dumping out the repo, we use Git commands to retrieve the logs for the repository
