Hack The Web – Forms

In this challenge, we're told to locate the answer in a the webpage...

Hack The Web – Forms

Then submit it to one of many submission fields, only one of which is the correct one

Hack The Web – Forms Webpage Sourcecode

```
        <p><input size="5" value"-> -> -> -> scroll further -> -> -> -> -> -> -> -> -> -> -> -> scroll
further -> -> -> -> -> -> -> -> -> -> -> -> scroll further -> -> -> -> -> -> -> -> -> -> -> -> scroll
further -> -> -> -> -> -> -> -> -> -> -> -> scroll further -> -> -> -> -> -> -> -> The answer is
comicsans'/>
        </p>
```

By examining the webpage's source code we can first locate the answer to the challenge

Hack The Web – Forms Webpage Sourcecode

```
<form autocomplete="off" method="post" id="challenge_form">
  <input id="challenge_answer" type="text" name="answer" style="height:32px">
  <input type="submit" id="challenge_submit" value="Los" style="height:32px;line-
ical-align:bottom;">
</form>

<form autocomplete="off" method="post" id="challenge_form" action="/wrong_submit">
  <input id="challenge_answer" type="text" name="answer" style="height:32px">
  <input type="submit" id="challenge_submit" value="Los" style="height:32px;line-
ical-align:bottom;">
</form>
```

Then we can find the form submission field in the sourcecode which is not a “wrong_submit”
